✓ Szalkowski Z. The Influence on Fibre Yield and Quality of Flax Straw Air-Conditioning.

„Wpływ klimatyzacji słomy lnianej na wydajność i jakość włókna”.
Przemysł Włókienniczy. No. 2, 1953, pp. 39—40, 1 tab.

Polish Technical Abst.
No. 1 1954
Textile, Leather and
Paper Industries

The author reviews, on the basis of literature and of results obtained by the Institute of Bast Fibres, the influence of artificial and natural air-conditioning of flax straw on the yield and quality of fibre. The direct processing of flax straw after drying it in drying chambers not provided with air-conditioning devices, contributes towards incurring substantial losses in long fibre. Proper utilisation in drying chambers of air-conditioning devices causes an increase of from 1.4 to 2.6 per cent in the yield of long fibre. The processing of straw containing an optimum degree of moisture obtained by means of natural humidification results in a further increase by 0.8 per cent in the yield of long fibres.

Szalkowski Z. The Technology of Processing Flax Straw on an Eirich System Turbine Unit (1954 Production).

"Technologia przerobu słomy lnianej na zespole turbinowym syst. Eiricha (prod. 1950 r.)". (Prace Inst. Przem. Włók. Łyk. No. 1), Warszawa, 1954, PWT, 16 pp., 14 figs., 16 tabs.

The author deals with the results of experiments, carried out in order to determine the principles of correct processing of flax straw on an Eirich system turbine unit. He reviews the influence of the most essential factors upon the results of processing, and deals in detail with the efficiency of combing and dressing the straw, as also with the effect of roll pressure and thickness of the raw material on the yield of scutched and combed fibre, and on the throughput of the unit. The review is preceded by a description of the leading features of the Eirich system turbine unit.

Szałkowski Z. The Effect of the Traffic Capacity of a Turbine Set on the Output of Scutched Flax.

„Wpływ przepływowości zespołu turbinowego na wydajność lnu trzpanego”. Przemysł Włókienniczy. No. 3, 1955, p. 76, 1 fig., 1 tab.

A high yield of long fibres is obtained from retted straw at a diminished traffic capacity (kg/hour) of the Etrich turbine set and a thin layer of straw (expressed by the number of stalks in the cross section) fed into the turbine. In order to maintain a relatively high traffic capacity of the turbine, the author advises an increase in the speed of the straw transporting belts from 28 m/min. (originally prescribed by designers) to 33 m/min., by means of a suitable change in the drive transmitting gear.

TITLE: Structural and autocorrelation function of the areal distribution of sunshine duration

2

SOURCE: Idejaras, v. 69, no. 6, 1965, 366-369

TOPIC TAGS: autocorrelation function, solar radiation

ABSTRACT: The structural and autocorrelation functions of sunshine duration were calculated on the basis of daily records from 20 observatories in Hungary, for a period of 100 days selected on the basis of changeable cloudiness. The mean squares of the errors of the interpolation were calculated from the structural functions for station networks of different densities. The results are useful for the statistical characterization of the areal distribution of sunshine duration and for the estimation of the reasonable density of the sunshine-recording network. Orig. art. has: 3 figures and 3 formulas. [Based on authors' Eng. abst.] [JPRS: 34,270]

Budapest, Orvosi Hetilap, Vol 104, No 34, 25 Aug 1963, pages 1615-1616.

Abstract: [Authors' Hungarian summary] The authors discuss the symptoms, differential diagnosis and etiology of sinus cavernosus thrombophlebitis and report the case of two of their patients where treatment was successful. Instead of intrathecal treatment, both patients received large doses of antibiotics, mainly i.v. tetran, for two weeks without ill effects and vitamins. Orbitotomy was performed on one of the patients. 1 Western, 3 Hungarian references.

AUTHOR: Szalontai, László

TITLE: Lay-out problems in special cases

PERIODICAL: Referativnyy zhurnal, Astronomiya i Geodeziya, no. 9, 1962, 11,
abstract 9G74 ("Építőipari és közlek. műsz. egyet. tud. közl.",
1961, v.7, no. 2, 269 - 285, Hungarian; Russian, English, French,
German and Spanish summaries)

TEXT: The author considers the cases of lay-out of construction, when specific conditions are given for location of the corners of a construction, in addition to sizes of its sides. So, it is requested that vertexes of an equilateral triangle should be located: on parallel straight lines; on coordinate axes; on concentric circles of a prescribed radius. Formulae are derived for calculating rectangular lay-out elements and examples are presented of their calculation. The author considers the case of determining the size of the sides of a square construction with such a lay-out that vertexes of the square approach, in the best possible way, to the given parallel lines. The latter problem is solved under condition of minimizing the sum of squares of deviations. G. Levchuk

"Idiopathic Thrombopenic Purpura and Pregnancy"

Budapest, Orvosi Hetilap, Vol 103, No 47, 25 Nov 62; pp 2234-2235.

Abstract: [Authors' Hungarian summary] Authors describe a case of idiopathic thrombopenic purpura that developed during pregnancy. During the pregnancy stage only a mild clinical manifestation of the idiopathic thrombopenic purpura could be observed in the patient. For this occurrence the authors hold the increased hypophyseoadrenal function to be mainly responsible. The postpartum hemorrhage was caused by remaining decidua. After the elimination of the retention authors were forced to amputate the uterus due to the uncontrollable bleeding. Since the bleeding did not stop after the operation and did not respond to transfusion of blood platelets, Cohn Fraction I and the administration of cortisone, splenectomy was performed, after which the bleeding stopped and the number of blood platelets became normal. The infant was born without purpura

"Some Lesser Known Data on Percussion of the Heart."

Budapest, Orvosi Hetilap, Vol 107, No 35, 28 Aug 66, pages 1657-1659.

Abstract: The finer details of percussion and the diagnostic conclusions which can be arrived at with the help of it are discussed. In some cases of contradictory or indefinite radiological findings, percussion can be used by the internist whose consultation with the radiologist may lead to a correct diagnosis. The value of percussion lies in the better evaluation of subjective symptoms along with the objective ones even at the stage of examination of the patient. Because of its simplicity, it is especially useful in the case of a severely ill patient who can only be moved with difficulty. 2 Hungarian, 2 Western references.
